Contents

1 Issue Overview

During the configuration of Doom Emacs, an error was encountered stating that the package `org-bullets` could not be found. This error prevented the successful loading of the Emacs configuration.

2 Error Message

The specific error message received was:

> (file-missing Cannot open load file No such file or directory org-bullets)

3 Troubleshooting Steps

To resolve the issue, the following steps were taken:

1. **Ensure the package is listed in `packages.el`** Verify that `org-bullets` is included in the `packages.el` file.

   - Open `packages.el` located in `~/.doom.d/` or `/home/rob/.dotfiles/.config/doom/`.
   - Add the following line if it's not already present:

   ███████████████████████████████████████

2. **Sync Doom Emacs** After confirming the package is listed, run the sync command to install `org-bullets`.

   - Execute the following command in the terminal:

   ███████████████████████████████████████

3. **Restart Emacs** Once the sync is complete, restart Emacs to ensure the package is loaded properly.

4. **Verify Configuration** Ensure that `org-bullets` is correctly referenced in `config.el`.

   - The relevant configuration should look like this:

   ███████████████████████████████████████

4   Outcome

After completing these steps, the error was resolved, and Doom Emacs loaded successfully with all configurations applied.

5   Additional Notes

- The `yasnippet` message about no snippets found is informational and can be ignored if snippets are not needed.

- The `ispell` process indicates that spell checking is set up and functioning correctly.
